

# Apprise<sup>®</sup> Design Studio

The Apprise Design Studio is a tool that empowers users and administrators with varied levels of authority to enhance and customise the standard Apprise<sup>®</sup> ERP application and graphical user interface (GUI) to meet specific user and company-wide needs and preferences — all without complex custom programming or needing access to source code.

## Flexible interface management

Utilise the Apprise Design Studio Standard Edition to gain access to several GUI modification capabilities, including the ability to pick or create display colour schemes, set hotkeys, and customise tab order at the user level. Create and manage workflows and dashboards, customise grids, create graphs, determine required data entry fields, and manage Favourites menu links quickly and seamlessly. License the Apprise Design Studio Corporate Edition to enhance your users' experience with the ability to rename, relocate, reorder, remove or add fields or buttons on screens at the system level. Improve system ease of use by making universal label changes that rename fields throughout the system and updating the text of pop-up messages in a way that is most relevant to you.

## Robust custom queries and screens

With Apprise Design Studio Corporate Edition, you can create, modify, and manage queries of common data elements—such as open sales, account receivables, and purchase orders—using the on-screen Enquiry Wizard and a set of pre-formed queries. The Enquiry Wizard enables users to quickly create and deploy custom enquiry screens without the need to write a single line of code. Custom enquiry screens contain the same usability as out-of-the-box Apprise ERP enquiry screens, and they support all standard screen capabilities such as Excel exporting and end-user customisation.

The Program Wizard is a dynamic screen generator used to create user interfaces for reports or custom scripts. This tool enables customers to integrate their own code and reports into Apprise ERP. Upon completion, these new entities look and act just like any other screen or report in Apprise ERP.

## Advanced customisations

The Apprise Design Studio Corporate Edition also contains two levels of customisation that lets you go in-depth to personalise Apprise ERP, the Apprise<sup>®</sup> Business API and Apprise<sup>®</sup> Screen Designer ERP. The Apprise Business API provides a front end which connects to a rich set of functions that can be used to invoke a wide variety of business processes. Apprise<sup>®</sup> Business API enables you to programmatically connect other systems to Apprise ERP, such as a third-party marketing system. The Apprise Screen Designer is a tool that lets you manipulate and customise UI elements. With this tool, you can alter the user interface, using a drag-and-drop tool, without accessing the code. Items you can alter include relabelling a field, creating new controls and wiring new logic to their events.

Get the tools you need, with the simplicity, ease of use, and flexibility you want, with Apprise Design Studio.
